

The Game-Changing Treatment for Kids with ADHD

The First and Only FDA-Authorized Video Game Treatment for Inattention in ADHD

EndeavorRx is clinically safe and proven to improve attention function in kids 8-12 with inattentive or combined-type ADHD.

It uses sensory personalized multitasking challenges to target areas of the brain that play a key role in attention function.

It's a prescription digital therapeutic. Like prescription medication, it's backed by robust clinical data. And it's safe with few to no side effects.

0%

of participants reported serious adverse events in EndeavorRx clinical trials.¹

Clinically Proven, Kid Approved.

EndeavorRx is clinically proven to improve ADHD-related symptoms in kids 8-12

56%

of parents reported improved attention after one month of treatment³

75%

of children said they could more easily pay attention after 2 months of treatment²

68%

of parents reported improvements in ADHD-related impairments²

How EndeavorRx Works

Kids are challenged to multitask and ignore distractions by navigating courses, collecting targets, and avoiding obstacles.

An algorithm measures performance and personalizes each child's treatment in real time.

EndeavorRx is prescribed as a "dose" of approximately 25 minutes, 5 days a week, for at least 4 consecutive weeks.¹

Patients saw **continued attention benefit during a 4-week treatment pause** and an increased benefit with a second month of treatment.

Cost

The current cost for EndeavorRx is \$99 for a 30 day prescription. EndeavorRx is also FSA/HSA eligible. For questions, please contact:

support@endeavorrx.com

Parents can follow their child's treatment with the EndeavorRx Insight® app to track daily efforts, level completion, and symptom improvement.

Interested in a Prescription? To learn more, ask your child's health care provider about the treatment.

EndeavorRx is a digital therapeutic indicated to improve attention function as measured by computer-based testing in children ages 8-12 years old with primarily inattentive or combined-type ADHD, who have a demonstrated attention issue. Patients who engage with EndeavorRx demonstrate improvements in a digitally assessed measure, Test of Variables of Attention (TOVA®), of sustained and selective attention and may not display benefits in typical behavioral symptoms, such as hyperactivity. EndeavorRx should be considered for use as part of a therapeutic program that may include clinician-directed therapy, medication, and/or educational programs, which further address symptoms of the disorder. No serious adverse events were reported. Federal law restricts this device to sale by or on the order of a licensed health care provider.
